Ray,

GCGCD has the well log for the Braquet well and for one of the two wells at the church. These logs will give you the screening data.

The other church well is drilled to 80 feet as per a church member, but we do not have a log of that well. Normally there is only one screening interval at the bottom of the well in this type of application and at this shallow depth.

Barbara Smith will email to you the two well logs in our files. In addition GCGCD will follow up with the church to find out if they have a log of the 80 foot well, which is the newer of the two wells. The newer well is used at the church and the older well for which we have a log is at the picnic grounds approximately 300 yards west of the church.

Regards,

Art Dohmann

Subject: Well construction question

Mr. Dohmann,

I hope this email finds you doing well. I have a question about the completed intervals in the Church wells and the Braquett well. Does the GCGWCD have that information documented? If so would you share it with me? Thanks.
